Notas: Testado em um PC com i5 (4ª ger) com 8Gb Ram e 512Gb SSD e Win10 64-bit

Pré-Requisitos

Baixar Máquina Virtual (MV) -> VirtualBox

(https://www.virtualbox.org/wiki/Downloads)

Baixar a versão do Ubuntu a ser utilizada

(https://releases.ubuntu.com/16.04/)

Ubuntu 16.04.6 LTS (Xenial Xerus)

Select an image

Ubuntu is distributed on two types of images described below.

Desktop image

The desktop image allows you to try Ubuntu without changing your computer at all, and at your option to install it permanently later. This type of image is what most people will want to use. You will need at least 384MiB of RAM to install

64-bit PC (AMD64) desktop image

Choose this if you have a computer based on the AMD64 or EM64T architecture (e.g., Athlon64, Opteron, EM64T Xeon, Core 2). If you have a non-64-bit processor made by AMD, or if you need full support for 32-bit code, use the i386 images instead. Choose this if you are at all unsure.

Step 1) Configurações e definições do Sistema Operacional (SO) a ser instalado

4 MB

5015

8192 MB

Recomendado no mínimo 40,00 GB

Step 2) Colocar imagem .ISO na VM

Encontre a imagem .ISO do seu SO Após essa etapa, a inicialização pode demorar um pouco (7 minutos).

Step 3) Configurações do SO

Selecione o idioma e a opção Instalar o Ubuntu

Se você tem a tela cortada, após clicar em Iniciar sessão automaticamente clique 3x a tecla Tab e depois Enter

Quando a instalação for concluída, será necessário reinicializar. Após a reinicialização, pressione Enter quando pedir para remover a imagem do boot.

Step +) Melhorar o desempenho da MV

Step ++) Alterar preferências da resolução do monitor
